

Dear Isabel,

I am so sorry, our engineer has modified MT board, correct adjustment is as following:
Adjustment of resistor type magnetic head: first of all, measure IC3-6 by turning RW3 and adjust to 2.8V then adjust RW1 till real note can misjudged and counterfeit note can be detected, adjust it clockwise, the sensitivity is high.
With my best regards

Juli

Primera explicación

Dear Isabel,

This is the method to adjust the magnetic board .

Adjustment of resistor type magnetic head: first of all, measure IC3-2 by turning RW4 and adjust to 2.1V-2.3V, then adjust RW1 till real note can misjudged and counterfeit note can be detected, adjust it clockwise, the sensitivity is high.

With my best regards

Juli
